

### Internship Site Description:

Innovations In Learning, PC, located in Hobart, IN, provides behavioral services and mental health counseling to adults, children and families. Although we work with individuals with and without special needs, our agency specializes in the treatment of behavior and emotional disorders in individuals with developmental disabilities. We take pride in using empirically based interventions while continuously monitoring our treatment efficacy through collection and analysis of behavior data. We serve equal numbers of adults and children and approximately 80% of our caseload includes individuals with developmental disabilities. Populations served include individuals diagnosed with PDD, Autism, Asperger Syndrome, Down Syndrome, Mental Retardation, Traumatic Brain Injury, Williams Syndrome, among others.

We are one of the few agencies in the area that are implementing Applied Verbal Behavior (AVB) for the treatment of communication disorders that are common in individuals with Autism and related disabilities. AVB services are provided in-home as well as in the clinic.

Interns at our site will have the opportunity to participate in individual and group therapy with children and adults. We will also provide training in behavioral consultation which includes behavior assessment, the development of a behavior support plan, caregiver training and monitoring of the support program. We work in an interdisciplinary system so interns will also participate as a member of a treatment team and manage treatment coordination between care providers.

For more information, please contact Innovations In Learning, PC at (219) 677-0008, or email Dr. Bridget Harrison at [bharrison@innovationsinlearning.net](mailto:bharrison@innovationsinlearning.net).
